make your cracked software work or install? Get the support from us here: ArrayList crashing when calling remove(). Where should this method be called? I've seen a few questions with the same title. But none of them were quite the same as mine, and so none of the answers were very useful to me. I have an object, "Blob", which is contained in an ArrayList. When an object of "Blob" is updated, it should be removed from the ArrayList. public class Blob{ private int index; private int size; private int[] data; public Blob(int index, int size){ this.index = index; this.size = size; data = new int[size]; for(int i = 0; i
