Title Update 7 For Xbox 360 from 4J Studios (Jan 25, 2013). Minecraft Xbox 360 Edition Title Update 4 Download & Install. Posted. Minecraft Xbox 360 Edition Title Update 1 - Xbox 360 720p.Q: Create cross-validation and apply to variables I have several variables and I need to create two cross-validation functions to predict each variables' actual value. The result would be a list with n variables and length of the list would correspond to the number of cross-validation. The problem is that I don't know how to implement the cross-validation functions. Should I create this function outside of my model? For example, I have a model: options(rspredict = 'S3method') model % predict(x = x, y = y) After that I will be getting list with the actual value of the variable. And the new problem is that I have several variables, so I need to cross-validate several variables, not one. validation_data % predict(x = x[var], y = y[var]) } Is my problem description correct? A: You could do this with a handy data.frame, and then you don't need to specify the variable name for each iteration. You would iterate over the column names of your
