i chose to test the vtc plug-ins first, as theyre the only emulations that arent in the virtual mix rack, and because the preset banks are built in the usual api 500 lunchbox format. like all of the vtc plug-ins i have tested to date, they both sound and behave exactly as i would expect. their lack of gain staging is certainly evident, and the latency between the two channels is also noticeably lower than their respective api 500 track and mix bus equivalents. they also sound almost perfectly identical to their api 500 counterparts in terms of tonal quality, and are just as easy to use. vcc 2.0 for windows 7, 8 and 10 adds yet another gain-staging hybrid compressor to the slate digital arsenal. like the rest of vcc 2.0, its bundled with the virtual mix rack, and is incredibly easy to use with a handful of presets already installed. i have played around with the plug-ins in vmr, and the presets are easy to use and are fun and easy to program. i personally enjoy the clean, old-school tone of the collection, but realise that many people will be after more of a bounce or sparkle tone. the presets are designed to be a starting point, and the effects can be modified in the same session if they are not to your liking. the virtual mix rack lets you mix between up to seven effects in each of four channels, and then sends them all to two mix buses, each with eight tracks. the preset bank is very generous, with more than 300 factory presets, and plenty of room to add your own. if you want simple yet effective analog-like emulation then it fits the bill very well. 5ec8ef588b
